

Feedback & Requests

1) I think we should incorporate in some way the statement:

Can't find what you want? Ask.

Don't see what you need? Ask.

Another possibly good place to put:

Can't find what you want? Ask. Don't see what you need? Ask.

→ **(I didn't understand, please clarify on the same)**

https://famepixel.in/projects/urodoc_kim_jin_doctors/perineoplasty.php

2) Can you find a better photo to replace the old one on:

https://famepixel.in/projects/urodoc_kim_jin_doctors/circumcision.php

→ **(We updated the proper related photo)**

3) Remove the Arabic on the page:

https://famepixel.in/projects/urodoc_kim_jin_doctors/vaginal-rejuvenation.php

→ **(Successfully removed)**

4) There are still some social media icons and broken links at the top of pages:

https://famepixel.in/projects/urodoc_kim_jin_doctors/premature-ejaculation-treatment.php#

→ **(Successfully removed)**

5) What is the function of:

`<link rel="canonical" href="https://www.yoursite.com/circumcision.php">`

Is that only going to perform some function in the future?

Is it no longer SEO advisable for the `<title>` tag to begin with the primary keyword?

`<title>` starts with Laser

"description" starts with Advanced

"keywords" starts with laser

None of the historically SEO important tags start with the topic of the page: Circumcision.

→ (There is no issue at the moment. This is just how it appears currently. Once the website goes live on the main domain. It will more precisely updated there. For now, I have updated it as you mentioned above.)

→ (The canonical tag tells Google and AI systems which URL is the official (preferred) version of a page when more than one URL could show the same or very similar content.

As per your query does it work now, or only in the future?

It works immediately. The canonical tag is active right now, not a future-use element.)

6) What in the code for this page is the SEO for AI?

https://famepixel.in/projects/urodoc_kim_jin_doctors/premature-ejaculation-treatment.php#

"premature ejaculation treatment" and "premature ejaculation meaning" are the 2nd and 4th predictions of Google when we type in "premature ejaculation". Must we have the keyword phrase on the page to attract AI attention?

In the Google search results section "People also ask" that is the middle of the first screen on search results, should those questions and Dr Kim's answer be on the page to rank highly?

How to stop yourself from ejaculating so fast?

Does low testosterone cause premature ejaculation?

How to correct weak ejaculation?

How to help a boyfriend with premature ejaculation?

Do the "People also search for" links at the bottom of search results need to have a match on the web page to achieve SEO?

How I cured my premature ejaculation

What is the fastest way to cure premature ejaculation

Premature ejaculation treatment

How do I check whether good SEO and AI SEO has been implemented on a page? I don't know how to check that.

(This is a part of off-page SEO and will be implemented properly once the website goes live on the main domain also after discussion with the team.)

7) https://famepixel.in/projects/urodoc_kim_jin_doctors/vaginal-rejuvenation.php#hymenoplasty

hymenoplasty

hymenoplasty surgery

hymenoplasty meaning

hymenoplasty surgery cost

hymenoplasty before and after

First YouTube suggestion title "Hymen Repair Surgery

2nd is Hymenoplasty | Hyman Reconstruction Surgery (that's a misspelling)

People also ask:

Why do girls do hymenoplasty?

What is hymenoplasty surgery?

Can I pee after hymenoplasty?

https://famepixel.in/projects/urodoc_kim_jin_doctors/vaginal-rejuvenation.php

<title>Vaginal Rejuvenation

<meta name="description" content="Comprehensive vaginal rejuvenation

<meta name="keywords" content="vaginal rejuvenation

These are all in the SERP from Google for "vaginal rejuvenation" but are not on the page or in the description, keywords or title.

vaginal rejuvenation surgery

vaginal rejuvenation surgery cost

vaginal rejuvenation procedure

vaginal rejuvenation meaning

vaginal rejuvenation treatment

Where do you get the keywords and keyword phrases? I don't know how to give you useful feedback.

vaginal rejuvenation

(There is no issue at the moment. This is just how it appears currently. Once the website goes live on the main domain. It will more precisely updated there. For now, I have updated it as you mentioned above.)

11) https://famepixel.in/projects/urodoc_kim_jin_doctors/about-dr-kim.php

Dr. Kim Jin Hong

Please put the doctor's full name at various places on the site because Kim is a popular family name like Singh. And I am not certain how Google will read the page subject headers which look like this when copies and pasted:
